

Environmental Policy

The Company and its subsidiaries are committed to conducting sustainable business operations based on environmental responsibility and place an important priority on reducing the environmental impact that may result from business operations by implementing effective environmental management systems. Therefore, the Company has established environmental policies based on the following principles:

Environmental management

1. The Company operates its business with regard to reducing environmental impacts and always realizes that the environment plays a very important role in the value chain of the business, which the Company must show responsibility for.
2. The Company places great importance on managing energy efficiently and controlling energy consumption with efficiency and maximum benefits to ensure that the business has sufficient energy sources in the long term and demonstrates the Company's broader responsibility to society and the environment.
3. The Company places importance on managing water resources to reduce the risk of water scarcity and has an efficient wastewater management system.
4. The Company places importance on managing garbage, waste, and pollution that may occur systematically in the business process, based on the 3R principles (Reduce Reuse Recycle), and has an efficient waste sorting system.
5. The Company promotes energy saving in both work processes and the selection of energy-saving and environmentally friendly electronic devices.
6. The Company will take into account the options that have minimal environmental impact when utilizing natural resources.
7. The Company will give a quick and efficient response to the events that have environmental impacts resulting from its operations, by fully cooperating with relevant government agencies and regulatory bodies.
8. The Company places importance on enhancing awareness and promoting values of environmental responsibility among all personnel and stakeholders. The Company communicates its environmental policy, organizes environmental, health and safety knowledge tests to make all employees aware of the importance of environmental conservation and provides training courses related to the environment, health and safety for personnel within the organization to improve knowledge and strengthen the guidelines for conducting oneself in accordance with the policy.

Greenhouse gas reduction management

Although the business operation of providing a comprehensive software solutions for the companies both within and outside the insurance industry does not have a significant impact or cause greenhouse gas emissions, the Company is aware of and emphasizes its social and environmental responsibility in preventing greenhouse gas emissions by managing environment, promoting the efficient and sustainable use of resources, reducing energy consumption, and minimizing greenhouse gas emissions from various company operations.

Due to the current operating activities of the Company, the Company and its subsidiaries do not have any significant greenhouse gas emissions. Therefore, the Company has not yet prepared greenhouse gas emissions data. The Board of Directors has assigned the Company's Chief Executive Officer to consider verifying the carbon footprint assessment of the Company and its subsidiaries if there are any changes in the business operation that may cause significant greenhouse gas emissions as deemed appropriate.
